ABSTRACT

This report presents an analysis of data for October 1975 compiled from the Current Population Survey on recent changes in school and college enrollment. Presented in statistical tables are data on the characteristics of students enrolled in nursery schools through college, including data on students' age, race, sex, marital status, living arrangements, and family income levels. The data reveal that enrollment in elementary schools has decreased by 3.5 million between 1970 and 1975. College attendance may also decline by the 1980s when the smaller birth cohorts reach college age. Increases in the enrollment of blacks and women, as well as graduate school enrollments, are indicated in the data. Fewer college students are currently living with primary family units (either spouses or parents). Twenty-five detailed statistical tables display the data on which these conclusions are based. School Enrollment—Social and Economic Characteristics of Students: October 1975

INTRODUCTION

This report presents an analysis of data for October 1975 from the Current Population Survey on recent changes in school and college enrollment. School enrollment patterns in 1975 for students attending nursery school through college by demographic and socioeconomic characteristics such as age, race, sex, marital status, living arrangements, and family income level are presented in statistical tables. Persons in the Armed Forces and inmates of institutions are not included in the figures shown in the statistical tables.

Changes by level of school. In October 1975 about 61 million persons 3 to 34 years old were enrolled in school—a rise of about 710,000 students in one year (table A). In addition, 1.2 million persons 35 years old and over were in school. In the past year, the number of students under 35 in college increased by 870,000[1] or 10 percent, but the number enrolled in elementary schools continued the decline that has been occurring throughout the 1970's. Enrollment in grades 1 through 8 declined by 680,000, a decrease of 2 percent between 1974 and 1975.

[1] Not significantly different from the increase in total enrollment.

Elementary school enrollment peaked around 1970 at about 34.0 million, but by 1975 it had dropped to 30.4 million, about the same level as in the early 1960's. Changes in elementary enrollment reflect the changing age distribution of the population of the United States. The total population increased by about 4 percent since 1970, whereas the population of elementary school age, those 6 to 13 years old, decreased by 10 percent. Elementary school enrollment declined by the same proportion since virtually all children in this age group are enrolled.

The decrease of 3.5 million students in elementary school between 1970 and 1975 reflects earlier declines in birth levels rather than reductions in enrollment rates. High schools experienced an increase of 1 million students in the same period. However, because smaller birth cohorts are moving through the school system, high schools will experience a reduction in enrollment unless large decreases occur in the proportion of students dropping out of high school. There has not been a significant change in the dropout rate between 1970 and 1975, and there is no basis for expecting change in the immediate future. College attendance may also begin to decline in the 1980's when the smaller birth cohorts reach college age, if the age specific enrollment rates do not increase greatly.

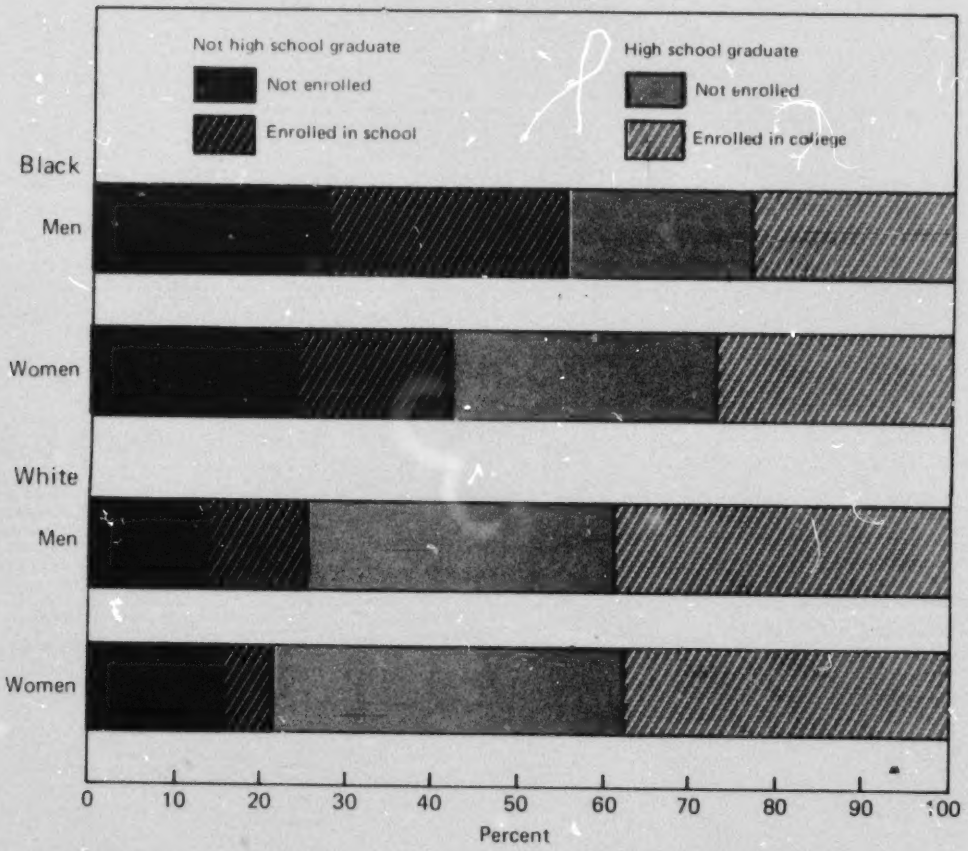
Figure 2. Enrollment Status of 18- and 19-Year-Olds by Educational Attainment, Race, and Sex: October 1975



Black college enrollment. There were 426,000 more Black students in college in 1975 than in 1970, an increase of about 80 percent in 5 years. White college enrollees increased by about one-fourth in the same period.

The educational level of Blacks was still significantly below that for Whites in 1975. For example, the proportion of Whites 25 to 29 years old who were college graduates was twice as high as the corresponding proportion for Black young adults (23 percent compared with 11 percent)[2], even though since 1970 the proportional increase in the number of college graduates 14 and over has been greater for Blacks than for Whites (65 percent increase compared with 33 percent). The educational level of Blacks is lower partially because a substantial proportion of young Black persons do not complete high school and therefore are not eligible for college. In fact, at ages 18 and 19 many young Blacks are still attending high school—22 percent compared with 8 percent of Whites. Another 25 percent of Blacks at these ages were not enrolled in school and had not yet graduated from high school in 1975, whereas only 15 percent of Whites were high school dropouts (table 1 and figure 2). For the educational level of Blacks to rise to that of Whites in the future, the initial change will have to occur in the proportion completing high school. (In 1975, 14 percent of Whites and twice that proportion of Blacks 25 to 29 years old had not completed high school and were not enrolled in school.) In the past a smaller proportion of Black high school graduates entered college, but in 1975 the proportion of Black high school graduates 18 and 19 years old enrolled in college was about equal to that of Whites (about 50 percent enrolled).

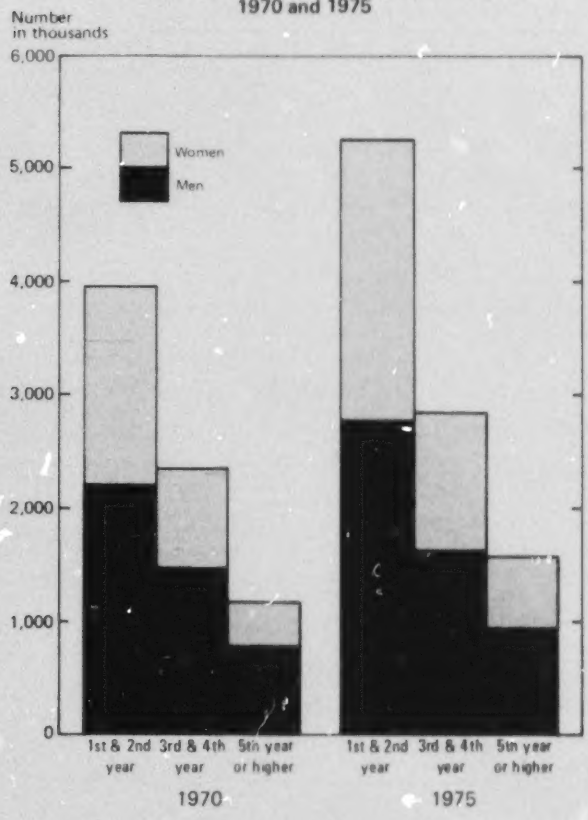
Although increases have occurred since 1970 in the number of Blacks enrolled in college, a large proportion of Blacks who enter college at the freshman level do not graduate. Nevertheless, there is some evidence from the October 1975 survey that further gains are being made by Blacks; they have risen from 5 percent of the college seniors in 1970 to 8 percent in 1975. The data show that not only are more Blacks entering college, but they are also remaining in school longer. A difference remains, however, between the proportion of freshmen and seniors who are Black (at the 94 percent level of confidence)—table 5.

Graduate school enrollment. College enrollment of persons under 35 years old increased by close to one-third

[2] U.S. Bureau of the Census, **Current Population Reports**, Series P-20, No. 295, "Educational Attainment: March 1975."

(31 percent) from 1970 to 1975. The increase in enrollment was larger in the entering levels, freshmen and sophomores, and among graduate students (table B and figure 3) than among juniors and seniors.

Figure 3. College Enrollment of the Population 14 to 34 Years Old by Level and Sex: October 1970 and 1975



Although graduate enrollment is only one-sixth of total college enrollment, 1.6 million students 20 to 34 years old were attending graduate and professional schools in 1975; this level was 40 percent above that in 1970. Many students leave college to enter the labor force each year, while others continue their education into graduate school in order to obtain more marketable skills which may give them a better competitive advantage.

The substantial increase in graduate school enrollment since 1970 was the result of about a 50-percent rise in the number of 20-to-34-year-old college graduates rather than an increase in the proportion of college graduates choosing to go on to graduate school. This large increase in the number of college graduates was due to a 21 percent increase in the number of persons in the age group, between 1970 and 1975 (the result of the late 1940's and early 1950's "baby boom"), and at the same time, an increase in the proportion of persons completing 4 years of college (from 14 to 17 percent of the age group).

Women in college. From 1970 to 1975 the increase in the number of women enrolled in college was substantially larger than that for men (table C). Women increased their enrollment by about 44 percent, whereas men increased theirs by about 21 percent. In 1975, women made up half of all freshmen but lower proportions of other undergraduate classes (table 5). This finding indicates a higher discontinuation rate for women than men, although the gap has narrowed. These developments coincide with other social and economic changes that have occurred recently among women such as marrying later, having fewer children, increased participation in the labor force, and continuing to work after children are born.[3] In recent years, more women have been remaining in the labor force and making economic use of their education.

Table B. College Enrollment of the Population 14 to 34 Years Old by Level: October 1975 and 1970

(Numbers in thousands)

College level	1975	1970	Percent change, 1970-75
Total, college enrollment	9,697	7,413	30.8
Undergraduate enrollment	8,108	6,274	29.2
1st and 2nd year	5,262	3,951	33.2
3rd and 4th year	2,846	2,323	22.5
Graduate enrollment	1,590	1,140	39.5
Men	949	774	22.6
Women	640	366	74.9

The large increase in female enrollment was partially accounted for by the substantial rise in the number of older women attending college. The number of women 25 to 34 years old in college more than doubled from 1970 to 1975, while the number of women students under 25 years old increased by about 30 percent. This change elevated older women from 14 to 22 percent of all college women under 35 years old (table C). The increase in enrollment of older women, who were more likely to be married than young women, contributed to the rise in the proportion of married women attending college (from 3 to 5 percent). On the other hand, the proportion of single (including separated, divorced, or widowed) women enrolled remained at about 27 percent. The increased accessability of two-year colleges may account for older women and married women increasing their college participation rates.

Undergraduate enrollment of women increased by about two-thirds in two-year colleges and by about one-third in four-year colleges from 1970 to 1975. About a third of all undergraduate women were in two-year colleges in 1975. A higher proportion of married women than single women in their first 2 years of college were enrolled in two-year colleges. Also women 20 to 34 years old in the first 2 years of college were more likely to be in two-year colleges, whereas younger female students were more likely to attend four-year colleges.

Among women, the total number of freshmen in two-year colleges is about the same as the number of freshmen in four-year colleges. However, two-thirds of the freshmen who entered college right after high school attended four-year colleges; three-fourths of the freshmen who delayed college entrance at least 5 years after graduating from high school were in two-year colleges. This was true for men as well as women.

Although women, in previous years, were more likely than men to graduate from high school, they were less likely to enter college or finish once entered. In the early 1960's, close to one-third of the female high school graduates 25 to 34 years old had attended college and less than half of those graduated. Among male high school graduates of the same age, almost half attended college and somewhat more than half of the men who attended completed 4 years. By 1975 for both men and women 25 to 34 years old, the proportion who had attended college increased substantially, and the college completion rate for women rose to about half but was still less than that for men.[4] College graduation is usually necessary to obtain entrance into the highest levels of professional and managerial occupations. Persons with some years of college, but without a completed degree, were more like high school graduates who did not attend college than college graduates in their income and occupation according to 1970 census data. Of former college students without degrees only about

25 to 29 years	590	6.9	255	3.7	131.4
30 to 34 years	357	5.0	154	2.6	131.8

one-fifth of the workers in their mid-twenties were employed in professional occupations compared with over three-fifths of college graduates.

There is evidence in the 1975 survey of enrollment that women are remaining in college longer and are more likely to be enrolled at higher levels than in the past (table D). A higher proportion of college seniors were women, for example, in 1975 than in 1970—44 percent compared with 37 percent. Also, women made up a significant proportion of graduate students in 1975. In the first year of graduate school, women were about half of all students.[5] In the second and higher years they constituted only about one-third, but significantly more than the 22 percent 5 years earlier. Not all changes suggest a rapid growth in the number of women obtaining advanced degrees, however. For example, a smaller proportion of the women graduate students than men were attending full time.

Family membership of college students. During the past 5 years, the proportion of young adults 18 to 24 years old who were married and living with their spouse decreased, and during the same period the proportion of young adults who were not members of families increased. Table E presents data on family membership and marital status of college students and those not enrolled in college. It shows that the proportion of 18-to-24-year-olds married and living with their spouse has declined for persons enrolled and those not enrolled in college. The proportion of persons who were independent of families has increased for both groups, and the proportion of all 18-to-24-year-olds who were part of their parents' household has not changed significantly since 1970. These data indicate that in the mid-1970's young persons were less likely to marry and more likely to be independent of families.

A question has arisen concerning the interpretation of data which show that more college students are becoming independent of their families. The question arises because Federal programs which provide economic assistance to college students based on the financial status of the family may have encouraged an increasing number of students to state that they were independent of their parents in order to receive grant money. In fact, a higher proportion of young persons were reported as being on their own and not family members in 1975 than in 1970, a shift from 9 to 13 percent. This change has occurred among college students and others alike; there seems to be little difference in the proportion of each group not in a family. Therefore, it appears that requirements of new grant programs had little to do with the changes in family status of students.

College students 18 to 24 years of age were more likely to be members of their parents' households than were others of the same age—about three-fourths versus less than one-half (Many unmarried college students were living away from their families while attending school but were still counted as part of their parents' households in the survey) table E and figure 1. There is some evidence that in the past 5 years, the proportion of students who were members of their parents' households has decreased slightly. In fact, among college students under 25 years of age the increase in independent persons was associated with decreases in both the proportion of students who were married with spouse present and the proportion who were part of their parents' households. Among those not in college, there was a decrease of 6.5 percentage points in the

[5] Not significantly different from the proportion of college seniors or the proportion of first year graduate students in 1970.

[1] Includes persons who did not report type of college.

proportion who were married and living with their spouses but increases in the proportions of persons who were members of parents' households and those who were not family members.

Therefore, overall, the increase in the departure of young college students from their parents' households to live independently is not very different from that for others of the same age who are not college students.

Table E. Marital Status and Family Membership of Persons 18 to 24 Years Old by College Enrollment Status and Sex: October 1975 and 1970

Year, enrollment status, and sex	Total number (thousands)	Total (percent)	In primary family		Not in primary family
			Married, spouse present	Other family member	
1975					
Total	26,387	100.0	34.6	52.4	13.0

Men	7,054	100.0	40.7	50.5	8.5
Women	9,693	100.0	56.1	35.5	8.3

EXPLANATION OF POPULATION ESTIMATES

In order to obtain estimates of the characteristics of the civilian noninstitutional population at the time the Current Population Survey is taken, weighted sample results of the survey are inflated using the most recent postcensal population estimates as bases. The base for inflation factors used with the October 1972 to 1975 surveys was the 1970 Census of Population; all previous years (since 1961) have been based on the 1960 Census of Population. A comparison of October 1971 survey data based on the 1960 census with revised data using the 1970 census as a base, shows the 1970-based estimates for all ages under 12 years old to be smaller than the 1960-based estimates. In comparing data based on different census years, it is important to consider the effect of weighting procedures. **Current Population Reports**, Series P-20, No. 260, appendix table B shows school enrollment data by age, sex, and level for October 1971 based on the 1970 census figures.

RELATED REPORTS

Advance data on school enrollment for October 1975 were presented in Series P-20, No. 294. Statistics on school enrollment for October of the years prior to 1975 have been published in other reports in Series P-20. See back cover for list.

Data on college plans of high school seniors for October 1975 were presented in "College Plans of High School Seniors: October 1975," **Current Population Reports**, Series P-20, No. 299. Data on nursery school and kindergarten enrollment for October 1974 were published in DHEW Publication No. (NCES) 76-147, "Preprimary Enrollment: October 1974" by the National Center for Education Statistics. A report on the relationship between preprimary enrollment of children and labor force participation of mothers from the years 1967 to 1975 is being prepared by the Bureau of the Census.

Statistics on school enrollment for cities, standard metropolitan statistical areas, States, regions, and the United States appear in reports of the decennial censuses. Detailed statistics on school enrollment by age and socioeconomic characteristics for regions and the United States are presented in Subject Reports of the 1970 census, especially in PC(2)-5A, School Enrollment.

Figures on school enrollment from the October Current Population Survey differ from decennial census data for reasons in addition to the difference in the dates. In the first place, the survey data exclude the institutional population and members of the Armed Forces. These two groups were included in the census. Second, there were differences in field work. The small group of Current Population Survey enumerators were more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Third, the census was taken in April and relates to enrollment since February 1, whereas the surveys were taken in October and relate to enrollment in the current term. This difference in months of the year affects not only the extent of school enrollment (through "dropouts" during the school year, etc.) but also the level of school in which persons of a given age are enrolled.

Data from school systems. Information on college enrollment is also collected and published by Federal, State, and local governmental agencies, and by independent research organizations. This information is generally obtained from reports of school systems and institutions of higher learning, and from other surveys and censuses. These data are only roughly comparable with data collected by the Bureau of the Census by household interviews, however, because of differences in definitions, subject matter covered, and enumeration methods. The census data are subject to sampling variability, which may be relatively large where numbers for specific age or population groups, or for given school categories, are small.

APPENDIX B

DEFINITIONS AND EXPLANATIONS

Population coverage. The figures shown are for the civilian population excluding the relatively small number of inmates of institutions.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties. The metropolitan population in this report is based on SMSA's as defined in the 1970 census and does not include any subsequent additions or changes.

The population inside SMSA's is further classified as "in central cities" and "outside central cities." With a few exceptions, central cities are determined according to the following criteria:

1. The largest city in an SMSA is always a central city.

2. One or two additional cities may be secondary central cities on the basis and in the order of the following criteria:

a. The additional city or cities have at least 250,000 inhabitants.
b. The additional city or cities have a population of one-third or more of that of the largest city and a minimum population of 25,000.

Geographic regions. The four major regions of the United States, for which data are presented in this report, represent groups of States, as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

North Central: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

School enrollment. The school enrollment statistics from the current surveys are based on replies to the enumerator's inquiry as to whether the person was enrolled in school. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of graded public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time or part-time basis and during the day or night. Thus, regular schooling is that which may advance a person toward an elementary or high school diploma, or a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for "regular" schools, and are also shown separately.

"Special" schools are those which are not in the regular school system, such as trade schools or business colleges. Persons attending "special" schools are not included in the enrollment figures.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a "regular" school.

College enrollment. The college enrollment statistics are based on replies to the enumerator's inquiry as to whether the person was attending or enrolled in college. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a four-year or two-year college, university or professional school (such as medical or law school), in courses that may advance the student toward a recognized college or university degree (e.g. BA or MA). Attendance may be either full time or part time, during the day or night.

Two-year and four-year college. Students enrolled in the first 3 years of college were asked to report whether the college in which they were enrolled was a two-year college (junior or community college). Those who replied "yes" were classified as enrolled in a two-year college. Those who replied "no" were classified as enrolled in a four-year college.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked in the 1974 survey concerning persons 14 to 24 years old who were not currently attending regular school or who were enrolled in college.

Level of school. The statistics on level of school indicate the number of persons enrolled at each of five levels: Nursery, kindergarten, elementary school (first to eighth grades), high school (ninth to twelfth grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in junior high school through the eighth grade are classified as in elementary school and the others as in high school.

Nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend both in the morning and afternoon.

"Head Start." Children enrolled in "Head Start" programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under "Nursery" or "Kindergarten" as appropriate.

Public or private school. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Full-time and part-time attendance. College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he was taking 12 or more hours of classes during the average school week, and part time if he was taking less than 12 hours of classes during the average school week.

Modal grade. Enrolled persons are classified according to their relative progress in school, that is, according to whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade, then, is the year of school in which the largest proportion of students of a given age is enrolled.

Age. The age classification is based on the age of the person as of October 1, 1974.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black.

Spanish origin. Information on origin or descent was obtained by asking "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of birth of himself or his parents. The category Spanish origin includes persons of Mexican, Puerto Rican, Central or South American, and other Spanish origin.

Marital status. The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse.

Family. The term "family," as used here, refers to a group of two persons or more related by blood, marriage, or adoption and residing together; all such persons are considered as members of one family.

Head of family. One person in each family residing together was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey.

Other family members. For the purpose of this report, an other family member is a relative of the household head, excluding the head's wife or any other relative who is married with a spouse present. Such persons are generally sons and daughters of the household head. Household members who are living away from home while attending college are also counted as other family members, if they are not married with a spouse present.

Years of school completed. Data on years of school completed in this report were derived from the combination of answers to two questions: (a) "What is the highest grade of school he has ever attended?" and (b) "Did he finish this grade?"

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance

a person toward an elementary school certificate, high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Family income. Income as defined in this report represents the combined total money income of the family before deductions for personal taxes, Social Security, bonds, etc. It is the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings received by all family members during the 12 months prior to the surveys. It should be noted that although the family income statistics refer to receipts during the previous 12 months, the characteristics of the person, such as age, marital status, etc., and the composition of families refer to the date of the survey.

The income tables include in the lowest income group (under $5,000) those who were classified as having no income in the previous 12 months and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The income tables in this report include a separate category for families for which no income information was obtained. In most of the other Current Population Survey Reports showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income for the preceding 12 months coded in broad, fixed income intervals. Income data collected in the March supplement to the Current Population Survey are based on responses to 8 direct questions asked of all persons 14 years old and over identifying 14 different sources of income and cover the preceding calendar year. (See table B-1).

Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonreporting while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

Table B-1. October CPS Control Card Family Income and March CPS Supplement Family Income for 1967 Through 1975

Year	Median family income, October control card	Percent change	Median family income, March supplement	Percent change	October-March ratio
1967	$6,575	(X)	$7,974	(X)	0.82
1968	7,060	7.4	8,632	8.3	0.82
1969	7,692	9.0	9,433	9.3	0.82
1970	8,093	5.2	9,867	1.6	0.82
1971	8,479	4.8	10,285	4.2	0.82
1972	9,115	7.5	11,116	8.1	0.82
1973	10,156	11.4	12,051	8.4	0.84
1974	10,650	4.9	12,836	6.5	0.83
1974[r]	10,650	(X)	12,902	(X)	0.83
1975	11,031	3.6	13,719	6.3	0.80

[r] March 1974 figures revised.

SOURCE AND RELIABILITY OF THE ESTIMATES

Source of data. Most of the estimates contained in these tables are based on data obtained from a supplement to the Current Population Survey (CPS) in October 1975. Some of the data in the tables are based on data obtained from similar supplements to CPS in October of each of the years 1947, 1950, 1955, 1960 and 1965 through 1974. Also, the text of this report refers to published data from supplements to CPS in March of years in the early 1960's.

Current population survey (CPS). The following table provides a description of some aspects of the Current Population Survey design.

The CPS deals mainly with labor force data. Questions relating to labor force participation are asked about each member 14 years old or older in the household. In the recent October supplements questions concerning educational characteristics, such as school enrollment, have been asked to acquire information about all levels of education.

Description of the Current Population Survey

Time period	Number of sample areas[1]	Households eligible		Households visited, not interviewed[2]
		Interviewed	Not interviewed	
August 1972 to present	461	45,000	2,000	8,000
August 1971 to July 1972	449	45,000	2,000	8,000
January 1967 to July 1971	449	48,000	2,000	8,500
March 1963 to December 1966	357	33,500	1,500	6,000
January 1960 to February 1963	333	33,500	1,500	6,000
May 1956 to December 1959	330	33,500	1,500	6,000
February 1954 to April 1956	230	21,000	500-1,000	3,000-3,500
1947 to January 1954	68	21,000	500-1,000	3,000-3,500

[1]These areas were chosen to provide coverage in each State and the District of Columbia.
[2]These are households which were visited, but were found to be vacant or otherwise not to be interviewed.

The estimation procedure used for both the CPS data and supplemental data involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from the 1970 Census of Population; statistics on births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces.

Reliability of the estimates. Since the estimates in these tables were based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions and enumerators. There are two types of errors possible in an estimate based on a sample survey--sampling and nonsampling. For estimates in this report, indications of the magnitude of sampling error are provided, but the extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. As in any survey work, the results are subject to errors of response and nonreporting in addition to sampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, inability to recall information, mistakes made in collection such as in recording or coding the data, mistakes made in processing the data, mistakes made in estimating values for missing data, and failure to represent all units with the sample (undercoverage). The approximate magnitude of two sources of undercoverage in CPS is known and is described next.

Approximately 600,000 conventional new construction units were issued building permits prior to the 1970 census but building was not completed by the time of the census (i.e., April 1970); these units have no representation in the CPS sample. Conventional new construction, for which building permits were issued after the census, is represented. In addition to undercoverage of conventional new construction, CPS misses approximately one-fourth of all new mobile homes (i.e., 400,000 units). These are missed because there is no systematic sampling procedure to provide representation of mobile homes constructed since the 1970 census.

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variations that occurred by chance because a sample rather than the whole of the population was surveyed. As calculated, the standard error also partially measures the effect of certain response and enumeration errors, but it does not measure any systematic biases in the data. The chances are about 68 out of 100 that an estimate from the survey differs from a complete census figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error, and about 95 out of 100 that the difference would be less than twice the standard error.

All the statements of comparison appearing in the text are significant at a 1.6 standard error level or better, and most are significant at a level of more than 2.0 standard errors. This means that for most differences cited in the text, the estimated difference is greater than twice the standard error of the difference. Statements of comparison qualified in some way (e.g., by use of the phrase "some evidence") have a level of significance between 1.6 and 2.0 standard errors.

Note when using small estimates. Percent distributions are shown in the report only when the base of the percentage is 75,000 or greater. Because of the large standard errors involved, there is little chance that percentages would reveal useful information when computed on a smaller base. Estimated totals are shown, however, even though the relative standard errors of these totals are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard error tables and their use. Instead of providing individual standard error tables for each characteristic of interest, generalized standard error tables for estimated numbers and estimated percentages, by race, are provided to conserve space. In all the standard error tables, standard errors for intermediate values not shown may be approximated by interpolation. In addition, where two or more items have nearly equal standard errors, such as total population and White population, one table is used to represent them. As a result, the tables of standard errors (along with the factors) provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

The figures presented in tables B-2 through B-7 provide approximations to standard errors of various estimates shown in this report. Estimated standard errors cannot be obtained from tables B-2 through B-4, however, without the use of table B-9. The numbers in table B-9, or combinations of them, correspond to the Total-Persons-in-Age-Group column headings in tables B-2 through B-7.

Table B-2. Standard Errors for Estimated Numbers of Persons Enrolled in School

Total or White Population

(68 chances out of 100. Numbers in thousands)

Estimated number of persons	Total persons in age group									
	100	250	500	1,000	2,500	5,000	10,000	25,000	50,000	100,000
10	4.4	4.6	4.6	4.6	4.6	4.7	4.7	4.7	4.7	4.7
20	5.9	6.3	6.5	6.5	6.6	6.6	6.6	6.6	6.6	6.6
30	6.8	7.6	7.8	7.9	8.0	8.0	8.1	8.1	8.1	8.1
40	7.2	8.5	8.9	9.1	9.2	9.3	9.3	9.3	9.3	9.3
50	7.4	9.3	9.9	10.2	10.3	10.4	10.4	10.4	10.4	10.4
75	6.4	10.7	11.8	12.3	12.6	12.7	12.7	12.7	12.7	12.8
100	-	11.4	13.2	14.0	14.4	14.6	14.7	14.7	14.7	14.7
200	-	9.3	16.1	18.6	20.0	20.4	20.6	20.	20.8	20.8
300	-	-	16.1	21.3	23.9	24.7	25.1	25.4	25.4	25.5
400	-	-	13.2	22.8	27.0	28.3	28.9	29.2	29.3	29.4
500	-	-	-	23.3	29.5	31.2	32.1	32.6	32.8	32.9
750	-	-	-	20.2	33.8	37.2	38.8	39.7	40.0	40.2
1,000	-	-	-	-	36.1	41.7	44.2	45.6	46.1	46.3
2,000	-	-	-	-	29.5	51.0	58.9	63.2	64.5	65.2
3,000	-	-	-	-	-	51.0	67.5	75.7	78.2	79.5
4,000	-	-	-	-	-	41.7	72.2	85.4	89.4	91.3
5,000	-	-	-	-	-	-	73.7	93.2	98.8	101.5
7,500	-	-	-	-	-	-	63.9	106.7	117.6	122.7
10,000	-	-	-	-	-	-	-	114.1	131.8	139.7
20,000	-	-	-	-	-	-	-	93.2	161.4	186.3
30,000	-	-	-	-	-	-	-	-	161.4	213.5
40,000	-	-	-	-	-	-	-	-	131.8	228.2
50,000	-	-	-	-	-	-	-	-	-	232.9
75,000	-	-	-	-	-	-	-	-	-	201.7
100,000	-	-	-	-	-	-	-	-	-	-

- Represents zero.

Note: To estimate the standard errors for the period 1956 to 1966, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table B-3. Standard Errors for Estimated Numbers of Persons Enrolled in School

Black and Other Races

(68 chances out of 100. Numbers in thousands)

Estimated number of persons	Total persons in age group						
	100	250	500	1,000	2,500	5,000	10,000
10	4.8	5.0	5.0	5.0	5.1	5.1	5.1
20	6.4	6.9	7.0	7.1	7.1	7.1	7.2
30	7.3	8.2	8.5	8.6	8.7	8.7	8.8
40	7.8	9.3	9.7	9.9	10.0	10.1	10.1
50	8.0	10.1	10.7	11.0	11.2	11.3	11.3
75	6.9	11.6	12.8	13.3	13.7	13.8	13.8
100	-	12.4	14.3	15.2	15.7	15.8	15.9
200	-	10.1	17.5	20.2	21.7	22.2	22.4
300	-	-	17.5	23.2	26.0	26.9	27.3
400	-	-	14.3	24.8	29.3	30.7	31.4
500	-	-	-	25.3	32.0	34.0	34.9
750	-	-	-	21.9	36.7	40.4	42.2
1,000	-	-	-	-	39.2	45.3	48.0
2,000	-	-	-	-	32.0	55.4	64.0
3,000	-	-	-	-	-	55.4	73.3
4,000	-	-	-	-	-	45.3	78.4
5,000	-	-	-	-	-	-	80.0
7,500	-	-	-	-	-	-	69.3
10,000	-	-	-	-	-	-	-

- Represents zero.

Note: To estimate the standard errors for the period 1956 to 1966, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table B-8 provides factors which must be used to calculate standard errors for each characteristic. These factors must be applied to the generalized standard errors in order to adjust for the combined effect of the sample design and the estimating procedure on the value of the characteristic. For example, to produce approximate standard errors for the marital status of Spanish origin persons, multiply the appropriate figures in tables B-4 or B-7 by the factor 1.4 from table B-8. The determination of the proper factor for a percentage depends upon the subject matter of the numerator of the percentage, not the denominator. For example, if a percent referred to the percentage of males enrolled in college whose families had income of less than $10,000 per year in October 1975, then the factor 1.2 for income of total persons is used.

Standard errors of estimated numbers. The approximate standard error, σ_x, of an estimated number shown in this report can be obtained by use of the formula $\sigma_x = f\sigma$. (1)

In this formula, f is the appropriate factor from table B-8 and σ is the standard error for total or White persons in table B-2, the standard error for Black and other races persons in table B-3 or the standard error for Spanish origin persons in table B-4.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends on both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. The approximate standard error, $\sigma_{(x,p)}$, of an estimated percentage can be obtained by use of the formula:

$$\sigma_{(x,p)} = f\sigma. \quad (2)$$

In this formula, f is the appropriate factor from table B-8 and σ is the standard error for total or White persons in table B-5, the standard error for Black and other races in table B-6, or the standard error for Spanish origin persons in table B-7. When the numerator and denominator of the percentage are in different categories, use the table and factor indicated by the numerator.

Illustration of the use of tables of standard errors. Table C of this report shows that in October 1975 there were 590,000 women 25 to 29 years old enrolled in college. The estimated total number of women 25 to 29 years old from table B-9 is 8,577,000. The factor in table B-8 for education, total or White, is 1.0. Using both the 8,577,000 estimated women in the age group and the estimated 590,000 women in the age group in college with table B-2, and formula (1), an approximate standard error of 34,000 = (34,000 x 1.0) is obtained. The chances are 68 out of 100 that the estimate would have been a figure differing from a complete census figure by less than 34,000. The chances are 95 out of 100 that the estimate would have been a figure differing from a complete census figure by less than 68,000 (twice the standard error).

Table B-4. Standard Errors for Estimated Numbers of Persons Enrolled in School

Spanish Origin

(68 chances out of 100. Numbers in thousands)

Estimated number of persons	Total persons in age group						
	100	250	500	1,000	2,500	5,000	10,000
10	5.9	6.1	6.1	6.2	6.2	6.2	6.2
20	7.8	8.4	8.6	8.7	8.7	8.8	8.8

1,000	0.9	1.4	1.9	2.7	3.1
2,500	0.5	0.9	1.2	1.7	2.0
5,000	0.4	0.6	0.8	1.2	1.4
10,000	0.3	0.4	0.6	0.8	1.0
15,000	0.2	0.3	0.5	0.7	0.8

Note: To estimate the standard errors for the period 1956 to 1966, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table B-8. "f" Factors to be Applied to Tables B-2 through B-7 to Approximate Standard Errors

Type of characteristic[1]	Total or White (B-2 or B-5)		Black and other races (B-3 or B-6)		Spanish origin (B-4 or B-7)	
	Persons	Families	Persons	Families	Persons	Families
Marital status and household and family	1.3	0.8	1.3	0.7	1.4	0.8
Income	[2]1.2	0.7	[2]1.0	0.6	[2]1.2	0.8
Residence	1.4	(X)	1.6	(X)	(X)	(X)
Kindergarten and nursery school enrollment	0.9	(X)	0.9	(X)	0.8	(X)
Educational attainment and school enrollment	1.0	(X)	1.0	(X)	1.0	(X)

X Not applicable.

[1]For metropolitan-nonmetropolitan data cross-tabulated with other data, also apply the factor 1.4 as well as the factor indicated in note.

[2]Persons tabulated by family income.

Note: Apply these factors to the standard error tables to obtain appropriate standard errors for the characteristic of interest.

Table E shows that 43.1 percent of the 19,452,000, 18-to-24-year olds who were not enrolled in college were in primary families and were married with spouse present. The factor in table B-8 for the marital status or household and family population characteristic for total persons is 1.3. Interpolation in table B-5 shows the standard error of 43.1 percent to be 0.5 percent. Thus, the standard error of 43.1 percent for the marital status or household and family characteristic is 0.65 = (0.5 x 1.3) percent. Consequently, the chances are 68 out of 100 that the estimated 43.1 percent would be within 0.65 percentage points of a complete census figure. Chances are 95 out of 100 that the estimate would be within 1.3 percentage points of a complete census figure, i.e., the 95-percent confidence interval would be from 41.8 to 44.4.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to the square root of the sum of the squared standard errors of the estimates; the estimates can be of numbers, percents, ratios, etc. This will represent the actual standard error quite accurately for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error.

Illustration of the computation of the standard error of a difference between estimated percentages. Table E shows that 10.8 percent of the 6,935,000 persons 18 to 24 years old enrolled in college were in primary families and were married with spouse present in October of 1975. The apparent difference between the 43.1 percent of 18-to-24-year olds who were not enrolled in college, who were in primary families and were married and the 10.8 percent described above is 32.3 percent. The standard error, σ_x, of 43.1 percent is 0.65 percent as shown above. The factor from table B-8 appropriate for the 10.8 percent is, again, 1.3. Table B-5 shows the standard error of 10.8 percent on a base of 6,935,000 to be 0.5 percent. Thus, the standard error, σ_y, of the estimate is also 0.65 = (0.5 x 1.3).

To get the standard error of the estimated difference, $\sigma_{(x-y)}$, use the following formula:

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2}.$$

Therefore, the standard error of the difference of 32.3 percent is 0.9 =

$$\sqrt{(0.65)^2 + (0.65)^2}.$$

This means the chances are 68 out of 100 that the estimated difference based on the sample estimates would vary from the difference derived using complete census figures by less than 0.9 percent. The 68-percent confidence interval about the 32.3 percent difference is from 31.4 to 33.2, i.e., 32.3 ± 0.9. A conclusion that the average estimate of the difference derived from all possible samples of the same size and design lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. The 95-percent confidence interval is 30.5 to 34.1. Thus, we can conclude with 95-percent confidence that there is a significant difference between the percentage of 18-to-24-year olds enrolled in college and the percentage of 18-to-24-year olds not enrolled in college who were in primary families and married with spouse present.

Table B-9. Estimates of Population in Age, Sex, Race Groups: October 1975

(Numbers in thousands)

Age	Total		White		Black and other races	
	Male	Female	Male	Female	Male	Female
3 years	1,622	1,556	1,339	1,278	283	278

CURRENT POPULATION REPORTS--SCHOOL ENROLLMENT

Series P-20

No. 1 School Enrollment of the Civilian Population: October 1946
No. 12 School Enrollment of the Civilian Population: April 1947
No. 19 School Enrollment of the Civilian Population: October 1947
No. 24 School Enrollment of the Civilian Population: October 1948
No. 30 School Enrollment of the Civilian Population: October 1949
No. 34 School Enrollment of the Civilian Population: October 1950
No. 40 School Enrollment: October 1951
No. 43 School Enrollment: October 1952
No. 45 School Enrollment, Educational Attainment and Illiteracy: October 1952
No. 52 School Enrollment: October 1953
No. 54 School Enrollment: October 1954

No. 66 School Enrollment: October 1955
No. 74 School Enrollment: October 1956
No. 80 School Enrollment: October 1957
No. 93 School Enrollment: October 1958
No. 101 School Enrollment: October 1959
No. 110 School Enrollment, and Education of Young Adults and Their Fathers: October 1960
No. 117 School Enrollment: October 1961
No. 126 School Enrollment: October 1962
No. 129 School Enrollment: October 1963
No. 148 School Enrollment: October 1964

No. 162 School Enrollment: October 1965
No. 167 School Enrollment: October 1966
No. 190 School Enrollment: October 1968 and 1967
No. 206 School Enrollment: October 1969
No. 222 School Enrollment: October 1970
No. 231 Undergraduate Enrollment in Two-Year and Four-Year Colleges: October 1970
No. 236 Undergraduate Enrollment in Two-Year and Four-Year Colleges: October 1971
No. 241 Social and Economic Characteristics of Students: October 1971
No. 252 College Plans of High School Seniors: October 1972
No. 257 Undergraduate Enrollment in Two-Year and Four-Year Colleges: October 1972
No. 260 Social and Economic Characteristics of Students: October 1972
No. 268 Nursery School and Kindergarten Enrollment: October 1973
No. 270 College Plans of High School Seniors: October 1973
No. 272 Social and Economic Characteristics of Students: October 1973
No. 281 Income and Expenses of Students Enrolled in Postsecondary Schools: October 1973
No. 284 College Plans of High School Seniors: October 1974
No. 286 School Enrollment—Social and Economic Characteristics of Students: October 1974
No. 289 Major Field of Study of College Students: October 1974
No. 299 College Plans of High School Seniors: October 1975
